### **Abstract**

The Europlanet Society is a membership organisation that gathers scientists in the field of planetology, planetary systems and space exploration. It provides the financial support, networks, and volunteer workforce. Fostering growth in both individual and organisational membership strengthens Europlanet's ability to deliver its mission and objectives, looking for scientific partners, potential donors, public institutions, and industry. Networking the wider membership leads to sharing of knowledge and opportunities (jobs, PhD positions, meetings and training), the exchange of ideas and best practices, and the establishment of fruitful collaborations.

### **Europlanet Regional Hubs**

The Europlanet Society Regional Hubs support the development of planetary science at a national and regional level, particularly in countries and areas that are currently under-represented within the community. The Regional Hub Committees organize networking events and workshops to support the research community, and build links with amateur astronomers, industrial partners, policymakers, educators, the media and the wider public. Europlanet Society members are welcome to participate in the activities of one or more Hubs.

Here we will perform the Italian Regional Hub and its activities.
